

**Vector Spaces**

**Introduction:** In this topic you will learn vector spaces, linear dependence and independence, basis, dimension.

**Vector Space**

**Definition:** Let  $V$  be non-empty set. Define two operations namely 'addition' and 'scalar multiplication' on  $V$ .  $V$  is said to be a vector space if for every  $u, v, w$  in  $V$  and any real, complex number  $\alpha$ , following axioms hold.

1.  $u + v \in V$  (closed under addition)
2.  $u + v = v + u$  (addition is commutative)
3.  $u + (v + w) = (u + v) + w$  (addition is associative)
4. There exists  $0 \in V$  such that  $u + 0 = 0 + u = u$ . (Existence of zero element for Addition known as additive identity)
5. There exists  $-u \in V \rightarrow -u + u = u + (-u) = 0$ . (Existence of additive inverse)
6.  $\alpha u \in V, \alpha \in \mathbb{R}$  {closed under scalar multiplication}
7.  $(\alpha + \beta)u = \alpha u + \beta u$  {Scalar multiplication is distributive}
8.  $\alpha(u + v) = \alpha u + \alpha v$
9.  $\alpha(\beta u) = (\alpha\beta)u$  {Scalar multiplication is associative}
10. There exists  $1 \in \mathbb{R}$  such that  $1 \cdot u = u$ .

**Elements / members of  $V$  are called as 'vectors'.**

**Theorem 1:** For a vector space  $V$

- i) Zero vectors are unique. ii)  $-u \in V$  is unique such that  $u + (-u) = 0$ .

**Theorem 2:** Let  $V$  be a vector space and let  $x, y$  be vectors in  $V$ , then

- i)  $x + y = x \Rightarrow y = 0$  ii)  $0 \cdot x = 0$  iii)  $k \cdot 0 = 0$  for any  $k \in \mathbb{R}$ .  
iv)  $-x$  is unique and  $-x = (-1)x$  v) If  $kx = 0$ , then  $k = 0$  or  $x = 0$ .

**Examples of Vector Spaces**

- 1)  $V = \{0\}$  (Set consisting of zero vector only)
- 2)  $\mathbb{R}^n = \{(x_1, x_2, \dots, x_n) / x_1, x_2, x_3, \dots, x_n \in \mathbb{R}\}$  (Set of all ordered  $n$ -tuple of real or complex numbers) is a vector space under component wise addition and scalar multiplication, i. e.,  $(x_1, x_2, \dots, x_n) + (y_1, y_2, \dots, y_n) = (x_1 + y_1, x_2 + y_2, \dots, x_n + y_n)$   
 $\alpha(x_1, x_2, \dots, x_n) = (\alpha x_1, \alpha x_2, \dots, \alpha x_n)$ .
- 3)  $P_n(x) =$  Set of all polynomials in  $x$  up-to degree ' $n$ '  
 $= \{a_0 x^n + a_1 x^{n-1} + \dots + a_n / a_0, a_1, \dots, a_n \in \mathbb{R}\}$   
is a vector space under usual addition and scalar multiplication of polynomials, i.e.  
 $(a_0 x^n + a_1 x^{n-1} + \dots + a_n) + (b_0 x^n + b_1 x^{n-1} + \dots + b_n) = (a_0 + b_0)x^n + (a_1 + b_1)x^{n-1} + \dots + (a_n + b_n)$   
 $\alpha(a_0 x^n + a_1 x^{n-1} + \dots + a_n) = (\alpha a_0)x^n + (\alpha a_1)x^{n-1} + \dots + (\alpha a_n)$ .
- 4)  $M_{m \times n}(\mathbb{R}) = \{[a_{ij}]_{m \times n} / a_{ij} \in \mathbb{R}, i = 1, 2, \dots, m; j = 1, 2, \dots, n\}$  is a vector space with usual addition and scalar multiplication of matrices, i. e.,  
 $[a_{ij}] + [b_{ij}] = [a_{ij} + b_{ij}]$  and  $\alpha[a_{ij}] = [\alpha a_{ij}]$ .
- 5)  $V = C[a, b] = \{f : [a, b] \rightarrow \mathbb{R}\}$  set of all real valued continuous functions is a vector space under addition and scalar multiplication of functions, i.e.,  
 $(f + g)(x) = f(x) + g(x)$  and  $(\alpha f)(x) = \alpha \cdot f(x)$ .

**Examples of sets which are not vector spaces**

1.  $P_2 =$  Set of polynomials of exactly degree 2 is not closed with respect to vector addition.

For Example: Let  $p(x) = -x^2 + 2x + 5, q(x) = x^2 + 3$

$\therefore p(x) + q(x) = 2x + 8 \notin P_2$  as  $2x + 8$  is not a polynomial of degree 2.

**Vector Spaces**

**2.** The set of integers is not a vector space. Because the set is not closed with respect to scalar multiplication. For example  $\frac{1}{3}(2) = \frac{2}{3} \rightarrow$  is not an integer.

**3.** Let  $V = \{(x, y, z) : x, y, z \in \mathbb{R}\}$ , with addition as

$$(x_1, y_1, z_1) + (x_2, y_2, z_2) = (x_1 + x_2, y_1 + y_2, z_1 + z_2) \text{ and scalar multiplication as}$$

$$c(x, y, z) = (cx, 0, 0) \quad [\text{Ans.: } 1(x, y, z) = (x, 0, 0) \neq (x, y, z)]$$

**4.** Let  $V = \{(x, y) : x, y \in \mathbb{R}\}$ , with standard operation of addition and nonstandard operation scalar multiplication defined as  $c(x, y) = (cx, y)$  is not a vector space.

[Ans.: In this example all the axioms are satisfied except axiom number 10.

$$0 \cdot (1, 1) = (0 \cdot 1, 1) = (0, 1) \neq (0, 0) \quad V \text{ is not a vector space.}]$$

**Subspace:** - Let  $V$  be a vector space and  $V \neq 0$ ,  $U \subset V$ ,  $U$  is said to be a subspace of  $V$  if  $U$  itself is a vector space under the same 'addition' and 'scalar multiplication' operations as defined on  $V$ .

**Theorem 1.4:** - A non-empty subset  $U$  of vector space  $V$  is a subspace of  $V$  if and only if

1)  $U$  is closed under addition, i. e.,  $u_1 + u_2 \in U$  for all  $u_1, u_2 \in U$

2)  $U$  is closed under scalar multiplication, i. e.,  $\alpha u \in U$  for every  $\alpha \in \mathbb{R}$  and  $u \in U$

**Note:** If  $0 \in V$  is not a member of  $U \subseteq V$  then  $U$  is not a subspace of  $V$ .

**Illustrative Examples:**

**Q 1)** Let  $A$  be  $m \times n$  matrix, then  $V = \{X \in \mathbb{R}^n : AX = 0\}$ , is a subspace of  $\mathbb{R}^n$ .

**Sol<sup>n</sup>:** Let  $x, y \in V \therefore Ax = 0$ , and  $Ay = 0$

Consider,  $A(x + y) = Ax + Ay = 0$ ,  $\therefore x + y \in V$  and Let  $\alpha \in \mathbb{R}$ , then  $A(\alpha x) = \alpha A(x) = 0$ ,  $\therefore \alpha x \in V$ . Therefore  $V$  is closed with respect to addition and scalar multiplication

$\therefore V$  is a subspace of  $\mathbb{R}^n$ .

**Q 2)** List all the subspaces of  $\mathbb{R}^2 = \{(x, y) \mid x, y \in \mathbb{R}\}$

**Sol<sup>n</sup>.** 1)  $\{(0, 0)\}$  2) Set of all lines passing through origin  $\{(x, y) \mid y = mx, m \in \mathbb{R}\}$   
3)  $\mathbb{R}^2$  itself.

**Q 3)** List all the subspaces of  $\mathbb{R}^3 = \{(x, y, z) \mid x, y, z \in \mathbb{R}\}$

**Sol<sup>n</sup>.** 1)  $\{(0, 0, 0)\}$  2) Any plane passing through origin.  
3) Any line passing through origin. 4)  $\mathbb{R}^3$  itself.

**Q 4)** Is  $\mathbb{R}^2$  a subspace of  $\mathbb{R}^3$ ?

**Sol<sup>n</sup>.** No, because  $\mathbb{R}^2$  is not even a subset of  $\mathbb{R}^3$  ( $\mathbb{R}^2$  has ordered pairs while  $\mathbb{R}^3$  has ordered triples)

**Q 5)** Let  $U$  and  $W$  are subspaces of a vector space  $V$ . Sum of  $U$  and  $W$  is defined as

$$U + W = \{u + w \in V : u \in U \text{ and } v \in V\} \text{ Show that } U + W \text{ is a subspace of } V.$$

**Sol<sup>n</sup>.** Let  $x, y \in U + W \therefore x = u_1 + w_1$  and  $y = u_2 + w_2$  where  $u_1, u_2 \in U$  and  $w_1, w_2 \in W$ .

Vector Spaces

$$\begin{aligned} \text{i)} \quad x + y &= (u_1 + w_1) + (u_2 + w_2) \\ &= (u_1 + u_2) + (w_1 + w_2) \text{ (by associativity and commutativity of } V) \\ &\text{but } (u_1 + u_2) \in U \text{ and } (w_1 + w_2) \in W \text{ (as } U \text{ and } W \text{ are subspaces of } V) \\ \therefore x + y &\in U + W. \end{aligned}$$

$$\begin{aligned} \text{ii)} \quad \text{Let } \alpha \text{ be any real number, } \alpha x &= \alpha(u_1 + w_1) = \alpha u_1 + \alpha w_1 \text{ (Distributive property of } V) \\ &\text{but } \alpha u_1 \in U \text{ and } \alpha w_1 \in W \text{ (as } U \text{ and } W \text{ are subspaces of } V) \\ \therefore \alpha x &\in U + W \quad \therefore U + W \text{ is a subspace of } V. \end{aligned}$$

**Examples of sets which are not subspaces**

**Q 1)** Is  $M$  the set of all singular matrices of order  $2 \times 2$  a subspace of  $M_{2 \times 2}(\mathbb{R})$ ?

**Sol<sup>n</sup>.**  $M$  is not a subspace because it is not closed under addition.

$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} + \begin{bmatrix} 0 & 0 \\ 1 & 2 \end{bmatrix} = \begin{bmatrix} 1 & 1 \\ 1 & 2 \end{bmatrix} \notin M. \text{ Since addition matrix is non-singular}$$

**Q 2)** Is  $\{(x, y) \mid y = mx, m \in \mathbb{R}\}$  a subspace of  $\mathbb{R}^2$ ?

**Sol<sup>n</sup>.**  $(x_1, y_1), (x_2, y_2) \Rightarrow y_1 = m_1 x_1, y_2 = m_2 x_2, y_1 + y_2 = m_1 x_1 + m_2 x_2 \neq m(x_1 + x_2)$

Hence it is not closed under addition. It is not a subspace of  $\mathbb{R}^2$ .

**Q 3)** Is  $H = \{(x, y) \mid y = mx, m \text{ is fixed real number}\}$  a subspace of  $\mathbb{R}^2$ ?

**Sol<sup>n</sup>.** Yes, because fixed real number  $\Rightarrow$  a single line passing through origin.

Let  $(x_1, y_1), (x_2, y_2) \in H \Rightarrow y_1 = mx_1, y_2 = mx_2$ .

$$\text{Consider, } (x_1 + x_2, y_1 + y_2) = (x_1 + x_2, mx_1 + mx_2) = (x_1 + x_2, m(x_1 + x_2)) \in H$$

and

$$\alpha(x_1, y_1) = (\alpha x_1, \alpha(mx_1)) = (\alpha x_1, m(\alpha x_1)) \in H \text{ as } m, \alpha \text{ both are real numbers.}$$

**Q 4)** Is  $H_1 = \{(x, y) \mid x^2 + y^2 = 1\}$  a subspace of  $\mathbb{R}^2$ ?

**Sol<sup>n</sup>.**  $H_1$  is not a subspace because  $(0, 0) \notin H_1$ .

**Q 5)** Is  $H_2 = \{(x, y) \mid x^2 + y^2 \leq 1\}$  a subspace of  $\mathbb{R}^2$ ?

**Sol<sup>n</sup>.**  $H_2$  is not a subspace because  $H_2$  is not closed under addition. e.g.  $(1, 0), (0, 1) \in H_2$  but

$$(1, 0) + (0, 1) = (1, 1) \notin H_2.$$

**Linear Combination (L.C.) of Vectors**

Let  $H = \{v_1, v_2, v_3, \dots, v_n\}$  be a subset of a vector space  $V$ , then the sum  $c_1 v_1 + c_2 v_2 + \dots + c_n v_n$ , where  $c_1, c_2, \dots, c_n \in \mathbb{R}$  is defined as a linear combination of  $v_1, v_2, \dots, v_n$ .

**# Span of a Set**

Let  $S = \{v_1, v_2, v_3, \dots, v_n\}$  be a subset of vector space  $V$ .

Vector Spaces

$\text{span}(S) = \{c_1 v_1 + c_2 v_2 + \dots + c_n v_n \mid c_1, c_2, \dots, c_n \in \mathbb{R}\} = \text{Set of all possible linear combination of members of } H$

**Theorem 1.5:** Let  $S = \{v_1, v_2, v_3, \dots, v_n\}$  be a subset of vector space  $V$ . Show that  $\text{span } S$  is a subspace of  $V$  containing  $S$ .

**Proof.** i) Let  $h_1, h_2 \in \text{span } H \Rightarrow \left. \begin{aligned} h_1 &= \sum_{i=1}^n a_i v_i \\ h_2 &= \sum_{i=1}^n b_i v_i \end{aligned} \right\} a_i, b_i \in \mathbb{R}, h_1 + h_2 = \sum_{i=1}^n (a_i + b_i) v_i = \sum_{i=1}^n c_i v_i, c_i \in \mathbb{R}.$

Therefore  $h_1 + h_2 \in \text{span}(S)$

ii) Let  $\alpha \in \mathbb{R}$  and  $\alpha h_1 = \sum_{i=1}^n (\alpha a_i) v_i = \sum_{i=1}^n d_i v_i, d_i \in \mathbb{R}$ . Therefore  $\alpha h_1 \in \text{span}(S)$

$\therefore \text{Span } S$  is a subspace of a vector space  $V$ .

**Note That :**  $\text{Span } S$  is a smallest subspace of  $V$  containing  $S$ .

Illustrative Examples

**Q 1)** Show that the set  $M$  of all symmetric matrices of order  $2 \times 2$  is a subspace of  $M_{2 \times 2}(\mathbb{R})$ .

**Sol<sup>n</sup>.** Consider any symmetric matrix  $A \in M$ . Then

$$A = \begin{bmatrix} a & c \\ c & b \end{bmatrix} = a \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} + b \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix} + c \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}, \text{ where } a, b, c \in \mathbb{R}.$$

Here  $A$  is a linear combination of  $\begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}$ ,  $\begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix}$  and  $\begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$  of  $M_{2 \times 2}$ .

$\therefore$  Set of symmetric matrices of order 2 is a subspace of  $M_{2 \times 2}(\mathbb{R})$ .

**Q 2)** Show that  $H = \left\{ \begin{bmatrix} a-b+c \\ 2a-b \\ a-b-5c \\ 2a-c \end{bmatrix} \right\}$  is a subspace of  $\mathbb{R}^4$ .

$$\text{Sol}^n. \quad \begin{bmatrix} a-b+c \\ 2a-b \\ a-b-5c \\ 2a-c \end{bmatrix} = a \begin{bmatrix} 1 \\ 2 \\ 1 \\ 2 \end{bmatrix} + b \begin{bmatrix} -1 \\ -1 \\ -1 \\ 0 \end{bmatrix} + c \begin{bmatrix} 1 \\ 0 \\ -5 \\ -1 \end{bmatrix} \Rightarrow H = \text{span} \left\{ \begin{pmatrix} 1 \\ 2 \\ 1 \\ 2 \end{pmatrix}, \begin{pmatrix} -1 \\ -1 \\ -1 \\ 0 \end{pmatrix}, \begin{pmatrix} 1 \\ 0 \\ -5 \\ -1 \end{pmatrix} \right\} = \{v_1, v_2, v_3\}$$

where  $v_1, v_2, v_3 \in \mathbb{R}^4$ .  $\therefore H$  is subspace of  $\mathbb{R}^4$ .

**Q 3)** Is  $H = \left\{ \begin{bmatrix} a-b+c \\ 5 \\ a-b-5c \\ 2a-c \end{bmatrix} \right\}$  a subspace of  $\mathbb{R}^4$ ?

**Sol<sup>n</sup>.** Since  $\begin{bmatrix} 0 \\ 0 \\ 0 \\ 0 \end{bmatrix}$  is not a member of  $H$ , it is not a subspace of  $\mathbb{R}^4$ .

Spanning Set

Let  $S = \{v_1, v_2, \dots, v_n\}$  be a subset of vector space  $V$ .  $S$  is said to be a spanning set of  $V$  if

**Vector Spaces**

every element of  $V$  is expressible as linear combination of elements of  $S$ , i.e.,  $v \in \text{span}\{S\}$  for all  $v \in V$ , i.e.,  $v = c_1v_1 + c_2v_2 + \dots + c_nv_n$  for some  $c_1, c_2, \dots, c_n$  is a consistent system of linear equations.

**Illustrative Examples**

**Q 1)** Let  $S = \{e_1 = (1, 0), e_2 = (0, 1)\}$ . Is  $S$  spanning set of  $\mathbb{R}^2$ ?

**Sol<sup>n</sup>.** Let  $(x, y) \in \mathbb{R}^2$ .  $(x, y) = xe_1 + ye_2$  is always consistent.  $\therefore S$  spans  $\mathbb{R}^2$ .

**Q 2)** Is  $S = \{1, x, x^2\}$  spans  $P_2$ ?

**Sol<sup>n</sup>.** Let  $p(x) \in P_2$  then  $p(x) = a_0x^2 + a_1x + a_2$ ;  $a_0, a_1, a_2 \in \mathbb{R}$ .  $\therefore S$  spans  $P_2$ .

**Q 3)** i) For what value of  $h$ , will  $y$  be in the subspace of  $\mathbb{R}^3$  spanned by  $v_1, v_2, v_3$

$$\text{where } v_1 = \begin{bmatrix} 1 \\ -1 \\ -2 \end{bmatrix}, v_2 = \begin{bmatrix} 5 \\ -4 \\ -7 \end{bmatrix}, v_3 = \begin{bmatrix} -3 \\ 1 \\ 0 \end{bmatrix} \text{ and } y = \begin{bmatrix} -4 \\ 3 \\ h \end{bmatrix}.$$

ii) Is  $v_1, v_2, v_3$  span  $\mathbb{R}^3$ ?

**Sol<sup>n</sup>.** i) Let  $y \in \text{span}\{v_1, v_2, v_3\}$ . Therefore  $y = c_1v_1 + c_2v_2 + c_3v_3$ .

$$\text{i.e. } \begin{bmatrix} -4 \\ 3 \\ h \end{bmatrix} = c_1 \begin{bmatrix} 1 \\ -1 \\ -2 \end{bmatrix} + c_2 \begin{bmatrix} 5 \\ -4 \\ -7 \end{bmatrix} + c_3 \begin{bmatrix} -3 \\ 1 \\ 0 \end{bmatrix} \Rightarrow \begin{aligned} c_1 + 5c_2 - 3c_3 &= -4 \\ -c_1 - 4c_2 + c_3 &= 3 \\ -2c_1 - 7c_2 + 0c_3 &= h \end{aligned}$$

$$\text{Consider the augmented matrix } [A : y] = \begin{bmatrix} 1 & 5 & -3 & : & -4 \\ -1 & -4 & 1 & : & 3 \\ -2 & -7 & 0 & : & h \end{bmatrix} \xrightarrow{R_2 + R_1, R_3 + 2R_1} \begin{bmatrix} 1 & 5 & -3 & : & -4 \\ 0 & 1 & -2 & : & -1 \\ 0 & -7 & -4 & : & h-8 \end{bmatrix}$$

$$\sim \begin{bmatrix} 1 & 5 & -3 & -4 \\ 0 & 1 & -2 & -1 \\ 0 & 3 & -6 & h-8 \end{bmatrix} \xrightarrow{R_3 - 3R_2} \begin{bmatrix} 1 & 5 & -3 & -4 \\ 0 & 1 & -2 & -1 \\ 0 & 0 & 0 & h-5 \end{bmatrix}.$$

For  $h=5$ ,  $\rho[A] = \rho[A : y]$ .  $\therefore$  The system of equations is consistent. Hence,

$y \in \text{span}\{v_1, v_2, v_3\}$  iff  $h=5$ .

ii)  $\{v_1, v_2, v_3\}$  does not span  $\mathbb{R}^3$  because the system of equations

$$v = c_1v_1 + c_2v_2 + c_3v_3$$

is not consistent for every  $v \in V$ .

**Q 3)** Let  $v_1 = \begin{bmatrix} 1 \\ 0 \\ -1 \end{bmatrix}, v_2 = \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix}, v_3 = \begin{bmatrix} 4 \\ 2 \\ 6 \end{bmatrix}, w = \begin{bmatrix} 3 \\ 1 \\ 2 \end{bmatrix}$

i) Is  $w$  belong to the set  $\{v_1, v_2, v_3\}$ ? ii) How many vectors are in the set  $\{v_1, v_2, v_3\}$ ?

iii) How many vectors are in  $\text{span}\{v_1, v_2, v_3\}$ ? iv) Is  $w \in \text{span}\{v_1, v_2, v_3\}$ ? Why?

v) Is  $\text{span}\{v_1, v_2, v_3\} = \mathbb{R}^3$ ?

**Sol<sup>n</sup>.** i) No.  $w$  is not a member of the set  $\{v_1, v_2, v_3\}$  because  $w \neq v_1 \neq v_2 \neq v_3$ .

ii) Total number of vectors in the set  $\{v_1, v_2, v_3\}$  are 3.

iii) There are infinite numbers of vectors in  $\text{span}\{v_1, v_2, v_3\}$ .

iv)  $w \in \text{span}\{v_1, v_2, v_3\}$

$$\text{Consider, } w = c_1v_1 + c_2v_2 + c_3v_3$$

Vector Spaces

$$\begin{bmatrix} 3 \\ 1 \\ 2 \end{bmatrix} = c_1 \begin{bmatrix} 1 \\ 0 \\ -1 \end{bmatrix} + c_2 \begin{bmatrix} 2 \\ 1 \\ 3 \end{bmatrix} + c_3 \begin{bmatrix} 4 \\ 2 \\ 6 \end{bmatrix} \Rightarrow \begin{aligned} c_1 + 2c_2 + c_3 &= 3 \\ 0c_1 + c_2 + 2c_3 &= 1 \\ -c_1 + 3c_2 + 6c_3 &= 2 \end{aligned}$$

Consider the augmented matrix,  $[A : B] = \begin{bmatrix} 1 & 2 & 4 & 3 \\ 0 & 1 & 2 & 1 \\ -1 & 3 & 6 & 2 \end{bmatrix} \xrightarrow{R_3 + R_1} \begin{bmatrix} 1 & 2 & 4 & 3 \\ 0 & 1 & 2 & 1 \\ 0 & 5 & 10 & 5 \end{bmatrix}$

$$\xrightarrow{R_3 - 5R_2} \begin{bmatrix} 1 & 2 & 4 & 3 \\ 0 & 1 & 2 & 1 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

$\rho[A : B] = \rho[A] \therefore$  The system of equations is consistent.

v) Consider  $v = c_1v_1 + c_2v_2 + c_3v_3$

$v = AC$ , as  $\rho[A] = 2 \neq \rho[A, v]$  for every  $v \in \mathbb{R}^3$ .  $\therefore$  This system is not consistent for every  $v \in \mathbb{R}^3$ .  $\therefore \text{Span}\{v_1, v_2, v_3\} \neq \mathbb{R}^3$ .

**Linearly Dependent/Independent Set**

Let  $H = \{v_1, v_2, v_3, \dots, v_n\}$  be a subset of a vector space  $V$ .  $H$  is said to be linearly dependent if there exist scalars (real numbers)  $c_1, c_2, \dots, c_n$  not all zero such that

$$c_1v_1 + c_2v_2 + c_3v_3 + \dots + c_nv_n = 0.$$

$H$  is said to be linearly independent if  $c_1v_1 + c_2v_2 + c_3v_3 + \dots + c_nv_n = 0$  implies

$$c_1 = c_2 = \dots = c_n = 0.$$

**Note:** i)  $H$  is linearly independent if and only if the system  $c_1v_1 + c_2v_2 + c_3v_3 + \dots + c_nv_n = 0$  has

trivial solution only, i.e. otherwise the set is linearly dependent.

ii) A set containing zero vector is linearly dependent.

iii) Set consists of single non – zero vector is linearly independent.

**Theorem 1.6:** - If the set of vectors are linearly dependent then one of the vectors is expressible as a linear combination of the remaining.

**Proof:-** The set is linearly dependent,  $c_1v_1 + c_2v_2 + c_3v_3 + \dots + c_nv_n = 0$  has a non-trivial solution

$\Rightarrow$  At least one of  $c_1, c_2, \dots, c_n$  is non-zero.

Let us assume that  $c_2 \neq 0$ . Then  $v_2 = \frac{-1}{c_2}(c_1v_1 + c_3v_3 + \dots + c_nv_n)$ .

**Method of checking Linearly Dependent / Independent Set**

Step 1: Consider,  $c_1v_1 + c_2v_2 + c_3v_3 + \dots + c_nv_n = 0$

$$AC = 0 \text{ where } A = [v_1 \ v_2 \ v_3 \ \dots \ v_n], \ C = \begin{bmatrix} c_1 \\ c_2 \\ \dots \\ c_n \end{bmatrix}.$$

Step 2: Find rank of  $A$ . Let  $\rho(A) = r$

Step 3: i) If  $\rho(A) = r = n$  (Number of unknowns), then set is linearly independent.

ii) If  $\rho(A) = r < n$  (Number of unknowns), then set is linearly dependent.

Step 3: If dependent find relation between the vectors.

**Illustrative Examples**

**Q 1)** Determine whether  $S = \{1-t, 2t+3t^2, t^2-2t^3, 2+t^3\}$  is linearly dependent or

**Vector Spaces**

independent. If dependent, find the relation between them.

**Sol<sup>n</sup>.** Let  $v_1 = 1-t$ ,  $v_2 = 2t+3t^2$ ,  $v_3 = t^2-2t^3$ ,  $v_4 = 2+t^3$ .

Consider,  $c_1v_1 + c_2v_2 + c_3v_3 + c_4v_4 = 0$ .

$$c_1(1-t) + c_2(2t+3t^2) + c_3(t^2-2t^3) + c_4(2+t^3) = 0 + 0t + 0t^2 + 0t^3$$

$$\begin{aligned} c_1 + 2c_4 &= 0 \\ -c_1 + 2c_2 &= 0 \\ 3c_2 + c_3 &= 0 \\ -2c_3 + c_4 &= 0 \end{aligned} \quad \text{i.e.} \quad \begin{bmatrix} 1 & 0 & 0 & 2 \\ -1 & 2 & 0 & 0 \\ 0 & 3 & 1 & 0 \\ 0 & 0 & -2 & 1 \end{bmatrix} \begin{bmatrix} c_1 \\ c_2 \\ c_3 \\ c_4 \end{bmatrix} = 0$$

Let

$$\begin{aligned} A = \begin{bmatrix} 1 & 0 & 0 & 2 \\ -1 & 2 & 0 & 0 \\ 0 & 3 & 1 & 0 \\ 0 & 0 & -2 & 1 \end{bmatrix} &\xrightarrow{R_2 + R_1} \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 2 & 0 & 2 \\ 0 & 3 & 1 & 0 \\ 0 & 0 & -2 & 1 \end{bmatrix} \xrightarrow{\frac{1}{2}R_2} \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 1 \\ 0 & 3 & 1 & 0 \\ 0 & 0 & -2 & 1 \end{bmatrix} \\ &\xrightarrow{R_3 - 3R_2} \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 1 \\ 0 & 0 & 1 & -3 \\ 0 & 0 & -2 & 1 \end{bmatrix} \xrightarrow{R_4 + 2R_3} \begin{bmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 1 \\ 0 & 0 & 1 & -3 \\ 0 & 0 & 0 & 5 \end{bmatrix} \end{aligned}$$

$\rho[A] = 4 = \text{number of unknowns}$ .  $\therefore$  The system has a trivial solution only.

$\therefore$  Set of vectors are linearly independent.

**Q 2)** Determine whether the set of vectors  $H = \left\{ \begin{bmatrix} 1 & 0 \\ 2 & 3 \end{bmatrix}, \begin{bmatrix} -2 & 1 \\ -1 & 0 \end{bmatrix}, \begin{bmatrix} 3 & 4 \\ 2 & 3 \end{bmatrix}, \begin{bmatrix} -3 & -3 \\ 1 & 3 \end{bmatrix} \right\}$  is linearly dependent or independent? If dependent, find the relation.

**Sol<sup>n</sup>.** Let  $v_1 = \begin{bmatrix} 1 & 0 \\ 2 & 3 \end{bmatrix}$ ,  $v_2 = \begin{bmatrix} -2 & 1 \\ -1 & 0 \end{bmatrix}$ ,  $v_3 = \begin{bmatrix} 3 & 4 \\ 2 & 3 \end{bmatrix}$ ,  $v_4 = \begin{bmatrix} -3 & -3 \\ 1 & 3 \end{bmatrix}$ .

Consider  $c_1v_1 + c_2v_2 + c_3v_3 + c_4v_4 = 0$ . ----- (i)

$$\begin{aligned} c_1 \begin{bmatrix} 1 & 0 \\ 2 & 3 \end{bmatrix} + c_2 \begin{bmatrix} -2 & 1 \\ -1 & 0 \end{bmatrix} + c_3 \begin{bmatrix} 3 & 4 \\ 2 & 3 \end{bmatrix} + c_4 \begin{bmatrix} -3 & -3 \\ 1 & 3 \end{bmatrix} &= 0 \Rightarrow \begin{aligned} c_1 - 2c_2 + 3c_3 - 3c_4 &= 0 \\ c_2 + 4c_3 - 3c_4 &= 0 \\ 2c_1 - c_2 + 2c_3 + c_4 &= 0 \\ 3c_1 + 3c_3 + 3c_4 &= 0 \end{aligned}$$

$$\begin{aligned} A = \begin{bmatrix} 1 & -2 & 3 & -3 \\ 0 & 1 & 4 & -3 \\ 2 & -1 & 2 & 1 \\ 3 & 0 & 3 & 3 \end{bmatrix} &\xrightarrow{R_3 - 2R_1, R_4 - 3R_1} \begin{bmatrix} 1 & -2 & 3 & -3 \\ 0 & 1 & 4 & -3 \\ 0 & 0 & -16 & 16 \\ 0 & 0 & -30 & 30 \end{bmatrix} \\ &\xrightarrow{\frac{1}{(-16)}R_3, \frac{1}{30}R_4} \begin{bmatrix} 1 & -2 & 3 & -3 \\ 0 & 1 & 4 & -3 \\ 0 & 0 & 1 & -1 \\ 0 & 0 & -1 & -1 \end{bmatrix} \xrightarrow{R_4 + R_3} \begin{bmatrix} 1 & -2 & 3 & -3 \\ 0 & 1 & 4 & -3 \\ 0 & 0 & 1 & -1 \\ 0 & 0 & 0 & 0 \end{bmatrix} \end{aligned}$$

$\rho[A] = 3 < \text{number of unknowns} = 4$ .  $\therefore$  The system has a non-trivial solution.

$\therefore$  Vectors are linearly dependent. Equivalent system is

$$c_1 - 2c_2 + 3c_3 - 3c_4 = 0, c_2 + 4c_3 - 3c_4 = 0, c_3 - c_4 = 0$$

$$\text{Let } c_4 = k, k \neq 0 \Rightarrow c_3 = k$$

**Vector Spaces**

$$c_2 + 4k - 3k = 0, \quad c_2 = -k, \quad c_1 + 2k + 3k - 3k = 0, \quad c_1 = -2k$$

Put values of  $c_1, c_2, c_3, c_4$  in (i),  $-2kv_1 - kv_2 + kv_3 + kv_4 = 0$ .

$$-2kv_1 - kv_2 + kv_3 + kv_4 = 0, \text{ i.e., } 2v_1 + v_2 - v_3 - v_4 = 0$$

**Q 3)** Let  $H = \{v_1, v_2, \dots, v_k\}$  spans  $V$ . Show that if  $H$  is linearly dependent then

$H_1 = \{v_1, v_2, \dots, v_{k-1}\}$  also spans  $V$ .

**Sol<sup>n</sup>.** Let  $v \in V$  then as  $H$  spans  $V$ ,  $v = d_1v_1 + d_2v_2 + \dots + d_kv_k$ .

If  $H$  is linearly dependent, then any vector in  $H$  is expressible as the linear combination of others. Therefore let  $v_k = c_1v_1 + c_2v_2 + \dots + c_{k-1}v_{k-1}$ . Substituting this in  $v$

$$v = (d_1 + d_k c_1)v_1 + (d_2 + d_k c_2)v_2 + \dots + (d_{k-1} + d_k c_{k-1})v_{k-1}$$

Thus  $v$  is expressible as linear combination of vectors in  $H_1$ . Hence  $H_1$  spans  $V$ .

**Q 4)** Determine by inspection if the given set is linearly independent

a)  $\begin{bmatrix} 1 \\ -1 \\ 6 \end{bmatrix}, \begin{bmatrix} 4 \\ 7 \\ -2 \end{bmatrix}, \begin{bmatrix} 1 \\ 1 \\ -2 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ 4 \end{bmatrix}$       b)  $\begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} -1 \\ 5 \\ 7 \end{bmatrix}, \begin{bmatrix} 2 \\ 3 \\ 1 \end{bmatrix}$

c)  $\begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \begin{bmatrix} 2 \\ 3 \\ 4 \end{bmatrix}, \begin{bmatrix} -4 \\ -6 \\ -8 \end{bmatrix}$       d)  $\begin{bmatrix} -2 \\ 4 \\ 6 \\ 10 \end{bmatrix}, \begin{bmatrix} 5 \\ -10 \\ -15 \\ 25 \end{bmatrix}$

**Sol<sup>n</sup>.** a) Set is linearly dependent, because it contains 4-vectors in  $\mathbb{R}^3$ .

b) Set is linearly dependent, because it contains zero vector.

c) Set is linearly dependent, because  $\begin{bmatrix} 2 \\ 3 \\ 4 \end{bmatrix} = -\frac{1}{2} \begin{bmatrix} -4 \\ -6 \\ -8 \end{bmatrix}$ .

d) Set is linearly independent as there is no relation between them.

**Basis of a Vector Space**

A subset  $B = \{v_1, v_2, \dots, v_n\}$  of a vector space  $V$  is a basis for  $V$  if

1)  $B$  is linearly independent.      2)  $V = \text{span}\{B\}$ , i.e.  $B$  spans  $V$ .

**Note That:** i) A given vector space may have more than one bases.

e.g.  $B_1 = \{e_1 = (1, 0), e_2 = (0, 1)\}$ ,  $B_2 = \{v_1 = (1, 1), v_2 = (-1, 1)\}$

Both  $B_1$  &  $B_2$  are bases of  $\mathbb{R}^2$ .

ii) A set having maximum number of linearly independent vectors is the basis.

iii) Minimum number of vectors which spans the set is the basis.

iv) If  $B = \{v_1, v_2, \dots, v_n\}$  is basis for vector space  $V$ , then every vector in  $V$  can be written in one and only one as a linear combination of vectors in  $B$ .

v) If a vector space  $V$  has one basis with  $n$  vectors, then every basis for  $V$  has  $n$  vectors.

**Dimension of a vector space**

Number of elements in a basis is known as the dimension of the vector space.

If basis of vector space  $V$  contains finite number of vectors, the vector space is finite dimensional. Otherwise it is said to be infinite dimensional.

# If basis of a vector space  $V$  has  $n$ -vectors then dimension of  $V = \dim(V) = n$  &  $\dim\{0\} = 0$ .

Vector Spaces

**Note That:** 1) In an  $n$ -dimensional vector space  $V$ , “ $n+1$ ” vectors are linearly dependent.

2) In an  $n$ -dimensional vector space  $V$ , “ $n-1$ ” vectors do not span vector space  $V$ .

• **Standard Bases**

- 1)  $V = R^n$  then the standard basis is  $B = \{e_1, e_2, \dots, e_n\}$ , where,  $e_1 = (1, 0, \dots, 0)$ ,  
 $e_2 = (0, 1, \dots, 0), \dots, e_n = (0, 0, \dots, 0, 1) \therefore \dim(R^n) = n$ .

In particular, for  $\mathbb{R}^2$  standard basis is  $\{(1, 0), (0, 1)\}$  and , for  $\mathbb{R}^3$  standard basis is  $\{(1, 0, 0), (0, 1, 0), (0, 0, 1)\}$ .

- 2)  $V = M_{2 \times 2}(R)$ .  $B = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 1 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix} \right\} \therefore \dim(M_{2 \times 2}(R)) = 4$ .

( **Note :** If  $V = M_{m \times n}(R)$  then  $\dim(M_{m \times n}(R)) = mn$  )

- 3)  $V = P_n(x)$  : space of polynomials in  $x$  at most degree  $n$  or degree  $\leq n$  . Standard basis

of  $P_n(x)$  is  $B = \{1, x, x^2, \dots, x^n\} \therefore \dim(P_n(x)) = n+1$ .

- 4)  $C[a, b]$ : space of all continuous functions defined on  $[a, b]$  is an infinite dimensional vector space.

**Illustrative Examples**

1. Is  $B = \{v_1, v_2\}$  a basis of  $\mathbb{R}^3$ , where  $v_1 = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$ ,  $v_2 = \begin{bmatrix} -1 \\ 2 \\ 1 \end{bmatrix}$  ?

**Sol<sup>n</sup>.** No. Because  $\dim(\mathbb{R}^3) = 3$ .

2. Is  $B = \{v_1, v_2\}$  a basis of  $\mathbb{R}^2$ , where  $v_1 = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$ ,  $v_2 = \begin{bmatrix} -1 \\ 2 \\ 1 \end{bmatrix}$  ?

**Sol<sup>n</sup>.** No. Because  $v_1$  &  $v_2$  are not even the members of  $\mathbb{R}^2$ .

3. What is the span  $\{B\}$  in the above example?

**Sol<sup>n</sup>.** It is a plane through origin. Since 3 non-collinear points viz origin, point corresponding to vector  $v_1$  and point corresponding to vector  $v_2$  forms a plane.

**Note:** If Basis of subspace  $V$  of  $\mathbb{R}^n$  contains

i) 1-vector, then geometrically it is a straight line in  $\mathbb{R}^n$  through origin.

ii) 2-vectors, then geometrically it is a plane in  $\mathbb{R}^n$  through origin.

**Illustrative Examples**

**Q 1)** Determine whether the set is a basis for  $M_{2 \times 2}(R)$  ?

$$S = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}, \begin{bmatrix} -1 & 0 \\ 1 & 1 \end{bmatrix}, \begin{bmatrix} 2 & 1 \\ 1 & 0 \end{bmatrix}, \begin{bmatrix} 1 & 1 \\ 0 & 1 \end{bmatrix} \right\}$$

**Sol<sup>n</sup>.** Since  $\dim(M_{2 \times 2}(R)) = 4$  and  $S$  contains 4 vectors, therefore  $S$  is a basis for  $M_{2 \times 2}(R)$  if and only if given set of vectors are linearly independent.

$$\text{Let } v_1 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}, v_2 = \begin{bmatrix} -1 & 0 \\ 1 & 1 \end{bmatrix}, v_3 = \begin{bmatrix} 2 & 1 \\ 1 & 0 \end{bmatrix}, v_4 = \begin{bmatrix} 1 & 1 \\ 0 & 1 \end{bmatrix}$$

**Mathematics and Statistics ES1043**  
**Vector Spaces**

Consider  $c_1v_1 + c_2v_2 + c_3v_3 + c_4v_4 = 0$ . i.e.  $AC = 0$  where  $A = \begin{bmatrix} 1 & -1 & 2 & 1 \\ 0 & 0 & 1 & 1 \\ 0 & 1 & 1 & 0 \\ 1 & 1 & 0 & 1 \end{bmatrix}$ .

$$\begin{array}{ccc} \xrightarrow{R_4 - R_1} & \begin{bmatrix} 1 & -1 & 2 & 1 \\ 0 & 0 & 1 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 2 & -2 & 0 \end{bmatrix} & \xrightarrow{R_2 \leftrightarrow R_3} \begin{bmatrix} 1 & -1 & 2 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 2 & -2 & 0 \end{bmatrix} \\ \xrightarrow{R_4 - 2R_2} & \begin{bmatrix} 1 & -1 & 2 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & -4 & 0 \end{bmatrix} & \xrightarrow{R_4 + 4R_3} \begin{bmatrix} 1 & -1 & 2 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 4 \end{bmatrix} \end{array}$$

$\rho(A) = 4 =$  number of unknowns. Hence given set of vectors are linearly independent.

Hence  $S$  is a basis for  $M_{2 \times 2}(\mathbb{R})$ .

**Q 2)** Determine whether the set  $S = (1, t, 1+t^2)$  a basis for  $P_2$  ?

**Sol<sup>n</sup>.**  $\because \dim(P_2(x)) = 3$  and  $S$  has exactly 3 elements, it forms a basis for  $P_2(x)$  iff set of vectors are linearly independent.

Let  $v_1 = 1, v_2 = t, v_3 = 1+t^2$

Consider  $c_1v_1 + c_2v_2 + c_3v_3 = 0$ , where  $A = \begin{bmatrix} 1 & 0 & 1 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \Rightarrow \rho(A) = 3 =$  number

of unknowns. Hence given set of vectors are linearly independent.

$\therefore S$  forms a basis for  $P_2$ .

**Note:** If  $W$  is a subspace of an  $n$ -dimensional vector space, then dimension of  $W$  is less than or equal to  $n$ .

**Method of determining the dimension of a subspace:** Dimension of a subspace can be determined by finding a set of linearly independent vectors that spans the subspace. This set is a basis for the subspace and its dimension is number of vectors in its basis.

**Illustrative Examples**

1. Determine the dimension of each subspace of  $\mathbb{R}^4$ .

$$a) S = \{(a, a+b, b, a-c) : a, b, c \in \mathbb{R}\} \quad b) S = \{(3a, a, b, 0) : a, b \in \mathbb{R}\}$$

**Sol<sup>n</sup>.** a)  $(a, a+b, b, a-c) = a(1, 1, 0, 1) + b(0, 1, 1, 0) + c(0, 0, 0, -1)$

we can see that  $S$  is spanned by  $(1, 1, 0, 1), (0, 1, 1, 0)$  and  $(0, 0, 0, -1)$

and can easily be shown that the set of vectors are linearly independent.

$\therefore B = \{(1, 1, 0, 1), (0, 1, 1, 0), (0, 0, 0, -1)\}$  is a basis for  $S$ .  $\therefore \dim(S) = 3$ .

$$b) (3a, a, b, 0) = a(3, 1, 0, 0) + b(0, 0, 1, 0)$$

we can see that  $S$  is spanned by  $(3, 1, 0, 0), (0, 0, 1, 0)$

and can easily be shown that the set of vectors are linearly independent.

$\therefore B = \{(3, 1, 0, 0), (0, 0, 1, 0)\}$  is a basis for  $S$ .  $\therefore \dim(S) = 2$ .

2. If  $W = \left\{ \begin{bmatrix} a & b \\ 0 & c \end{bmatrix} : a, b, c \in \mathbb{R} \right\}$  is a subspace of  $M_{2 \times 2}$ . What is a dimension of  $W$ ?

$$\text{Sol}^n. \begin{bmatrix} a & b \\ 0 & c \end{bmatrix} = a \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} + b \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix} + c \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix}$$

Vector Spaces

So, the set  $B = \left\{ \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix} \right\}$  is a basis for  $W$ .  $\therefore \dim(W) = 3$ .

3. Find the dimension of the subspace  $W = \left\{ \begin{bmatrix} a-3b+2c \\ b-4c-3d \\ a-3c-2d \\ 2a+5b-2c+d \end{bmatrix} : a, b, c, d \in \mathbb{R} \right\}$

$$\text{Sol}^n. \begin{bmatrix} a-3b+2c \\ b-4c-3d \\ a-3c-2d \\ 2a+5b-2c+d \end{bmatrix} = a \begin{bmatrix} 1 \\ 0 \\ 1 \\ 2 \end{bmatrix} + b \begin{bmatrix} -3 \\ 1 \\ 0 \\ 5 \end{bmatrix} + c \begin{bmatrix} 2 \\ -4 \\ -3 \\ -2 \end{bmatrix} + d \begin{bmatrix} 0 \\ -3 \\ -2 \\ 5 \end{bmatrix}$$

$W$  is spanned by  $\begin{bmatrix} 1 \\ 0 \\ 1 \\ 2 \end{bmatrix}, \begin{bmatrix} -3 \\ 1 \\ 0 \\ 5 \end{bmatrix}, \begin{bmatrix} 2 \\ -4 \\ -3 \\ -2 \end{bmatrix}, \begin{bmatrix} 0 \\ -3 \\ -2 \\ 5 \end{bmatrix}$ , i.e., these vectors are a basis for  $W$  if vectors are

Linearly independent.

$$\therefore \text{consider } A = \begin{bmatrix} 1 & -3 & 2 & 0 \\ 0 & 1 & -4 & -3 \\ 1 & 0 & -3 & -2 \\ 2 & 5 & -2 & 5 \end{bmatrix} \xrightarrow{R_3-R_1, R_4-2R_1} \begin{bmatrix} 1 & -3 & 2 & 0 \\ 0 & 1 & -4 & -3 \\ 0 & 3 & -5 & -2 \\ 0 & 11 & -6 & 5 \end{bmatrix}$$

$$\xrightarrow{R_3-3R_2, R_4-11R_2} \begin{bmatrix} 1 & -3 & 2 & 0 \\ 0 & 1 & -4 & -3 \\ 0 & 0 & 7 & 7 \\ 0 & 0 & 38 & 38 \end{bmatrix} \xrightarrow{R_4-\frac{38}{7}R_3} \begin{bmatrix} 1 & -3 & 2 & 0 \\ 0 & 1 & -4 & -3 \\ 0 & 0 & 7 & 7 \\ 0 & 0 & 0 & 0 \end{bmatrix} \therefore \rho(A) = 3$$

$\therefore$  basis for subspace  $W$  of  $\mathbb{R}^4$  pivot columns of  $A$

$$\therefore \text{basis for subspace } W = B = \left\{ \begin{bmatrix} 1 \\ 0 \\ 1 \\ 2 \end{bmatrix}, \begin{bmatrix} -3 \\ 1 \\ 0 \\ 5 \end{bmatrix}, \begin{bmatrix} 2 \\ -4 \\ -3 \\ -2 \end{bmatrix} \right\} \therefore \dim(W) = 3.$$

### Column space, Row space and Null space of a Matrix

#### # Column Space of a Matrix

Let  $A$  be  $m \times n$  matrix. Column space of matrix  $A$  is the set of all possible linear combinations

of columns of  $A$ , denoted as  $\text{col}(A)$ , i.e., If  $A = [v_1 \ v_2 \ \cdots \ v_n]$  then

$$\text{col}(A) = \text{span}\{v_1 \ v_2 \ \cdots \ v_n\}$$

**Note :** 1) Number of columns of  $A = n$

2) Number of vectors in  $\text{col}(A) = \text{infinite}$ .

3)  $\text{col}(A)$  is a subspace of  $\mathbb{R}^m$ .

4)  $y \in \text{col}(A)$  means the system of linear equations  $y = AX$  for some

$$X \in \mathbb{R}^n \text{ is consistent. i. e. } \text{col}(A) = \{y \in \mathbb{R}^m : y = AX \text{ for some } X \in \mathbb{R}^n\}$$

5) Elementary row operation on a matrix does not affect the linear dependence

**Vector Spaces**

relation among the columns of the matrix.

6) The Pivot columns of matrix A form a basis for Col(A).

**# Row Space of a Matrix**

Let A be  $m \times n$  matrix. Row space of matrix A is the set of all possible linear combinations of rows of A, denoted as row(A).

**Note :** 1) number of rows of A = m

2) number of vectors in row(A) = infinite

3) row(A) is a subspace of  $R^n$

4)  $y \in \text{row}(A)$  means this system of linear equations  $y = A^T X$  for some  $X \in R^m$  is consistent.

**# Null Space of a Matrix**

Let A be  $m \times n$  matrix. Null space of A is the set of all those vectors in  $R^n$  which get map on to zero by A, denoted as Null(A), i. e.,  $\text{Null}(A) = \{x \in R^n \mid AX = 0\}$ .

**Note :** 1) Null(A) is a subspace of  $R^n$ .  $0 \in \text{Null}(A)$ . Let  $x_1, x_2 \in \text{Null}(A)$ , then

$$Ax_1 = 0, Ax_2 = 0 \Rightarrow A(x_1 + x_2) = Ax_1 + Ax_2 = 0 \Rightarrow x_1 + x_2 \in \text{Null}(A)$$

$$\alpha(Ax_1) = \alpha Ax_1 = 0 \Rightarrow \alpha A = \text{Null}(A)$$

Null(A) is the subspace of  $R^n$  (solution space of the homogeneous system  $AX = 0$ .)

2) If  $\rho(A) = r$ , then  $\dim(\text{Null } A) = n - r = \text{Nullity of } A$ .

3)  $\dim(\text{col } A) = \dim(\text{row } A) = r$ .

**Theorem :** For any matrix  $A_{m \times n}$ ,  $\dim(\text{Null } A) + \dim(\text{col } A) = \text{number of columns of } A$ .

**Illustrative Examples**

1. Determine the basis for Null(A), col(A) and row(A) and hence determine their dimensions. Assume that A is row equivalent to B.

$$A = \begin{bmatrix} 1 & -3 & 4 & -1 & 9 \\ -2 & 6 & -6 & -11 & -10 \\ -3 & 9 & -6 & -6 & -3 \\ 3 & -9 & 4 & 9 & 0 \end{bmatrix}, B = \begin{bmatrix} 1 & -3 & 0 & 5 & -7 \\ 0 & 0 & 2 & -3 & 8 \\ 0 & 0 & 0 & 0 & 5 \\ 0 & 0 & 0 & 0 & 0 \end{bmatrix}$$

**Solution:** Given :  $A \sim B$ .

Each non-pivot columns of B is a linear combination of pivot columns.

In this example it is to observe that

$$b_2 = -3b_1 \text{ and } b_4 = 5b_1 - \frac{3}{2}b_3 \quad \therefore a_2 = -3a_1 \text{ and } a_4 = 5a_1 - \frac{3}{2}a_3$$

by spanning set theorem we may discard  $a_2$  and  $a_4$ , to get Basis for column space of A, is the set containing pivot columns of A.

$$\text{Basis for col}(A) = \left\{ \begin{bmatrix} 1 \\ -2 \\ -3 \\ 3 \end{bmatrix}, \begin{bmatrix} 4 \\ -6 \\ -6 \\ 4 \end{bmatrix}, \begin{bmatrix} 9 \\ -10 \\ -3 \\ 0 \end{bmatrix} \right\} \quad \dim(\text{col } A) = 3$$

Basis for row space of A, is the set containing pivot rows of B.

Therefore Basis for row(A) is  $\{(1, -3, 0, 5, -7), (0, 0, 2, -3, 8), (0, 0, 0, 0, 5)\}$ .

Therefore  $\dim(\text{row } A) = 3$ .

**Basis for Null(A)** – is the solution space of  $AX = 0$ .

Equivalent system is  $x_1 - 3x_2 + 5x_4 - 7x_5 = 0, 2x_3 - 3x_4 + 8x_5 = 0, 5x_5 = 0 \Rightarrow x_5 = 0$

Vector Spaces

Let  $x_4 = k_1$  &  $x_2 = k_2$ ,  $x_1 = 3k_2 - 5k_1$ .

$$\therefore \text{Solution vector } X = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \\ x_5 \end{bmatrix} = \begin{bmatrix} 3k_2 - 5k_1 \\ k_2 \\ 3k_1 \\ k_1 \\ 0 \end{bmatrix} = k_1 \begin{bmatrix} -5 \\ 0 \\ 3 \\ 1 \\ 0 \end{bmatrix} + k_2 \begin{bmatrix} 3 \\ 1 \\ 0 \\ 0 \\ 0 \end{bmatrix}. \text{Basis for Null (A) is}$$

$$\left\{ \begin{bmatrix} -5 \\ 0 \\ 3 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ 0 \\ 0 \\ 0 \end{bmatrix} \right\}. \dim(\text{Null}(A)) = 2.$$

2. Find k such that Null space of A is subspace of  $\mathbb{R}^k$  and column space of A is subspace

$$\text{of } \mathbb{R}^k, \text{ where } A = \begin{bmatrix} 1 & 2 & -1 & 5 \\ 3 & 1 & -1 & 1 \\ 7 & 6 & 5 & 2 \\ 1 & 2 & -3 & 1 \\ 2 & 0 & 1 & 3 \end{bmatrix}.$$

**Sol<sup>n</sup>.** i) Here A is  $5 \times 4$  matrix and we know that Nullspace is a subspace of  $\mathbb{R}^4$ ,  $\therefore k = 4$ .

ii) Here A is  $5 \times 4$  matrix and we know that column space is a subspace of  $\mathbb{R}^5$ ,  $\therefore k = 5$ .

$$3. \text{Let } A = \begin{bmatrix} -8 & -2 & -9 \\ 6 & 4 & 8 \\ 4 & 0 & 4 \end{bmatrix} \text{ and } w = \begin{bmatrix} 2 \\ 1 \\ -2 \end{bmatrix}.$$

i) determine if w is in column space of A. ii) Is w in null space of A? iii) Is w in row space of A?

ii) w is in  $\text{null}(A)$  if and only if  $Aw = 0$

$$Aw = \begin{bmatrix} -8 & -2 & -9 \\ 6 & 4 & 8 \\ 4 & 0 & 4 \end{bmatrix} \begin{bmatrix} 2 \\ 1 \\ -2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix} \therefore w \in \text{null}(A).$$

iii) w will be in row space of A, if there exists some vector  $x \in \mathbb{R}^3$  such that  $A^T x = w$  is consistent

$$[A^T, w] = \begin{bmatrix} -8 & 6 & 4 & 2 \\ -2 & 4 & 0 & 1 \\ -9 & 8 & 4 & -2 \end{bmatrix} \xrightarrow{R_1 - R_3} \begin{bmatrix} 1 & -2 & 0 & 0 \\ -2 & 4 & 0 & 1 \\ -9 & 8 & 4 & -2 \end{bmatrix} \xrightarrow{R_2 + 2R_1, R_3 + 9R_1} \begin{bmatrix} 1 & -2 & 0 & 0 \\ 0 & 0 & 0 & 1 \\ 0 & -10 & 4 & -2 \end{bmatrix}$$

$$\xrightarrow{R_2 \leftrightarrow R_3} \begin{bmatrix} 1 & -2 & 0 & 0 \\ 0 & -10 & 4 & -2 \\ 0 & 0 & 0 & 1 \end{bmatrix} \therefore \rho[A, w] \neq \rho[A]. \therefore w \notin \text{Row}(A).$$

4. If  $AX = V$  and  $AX = W$  are both consistent. Is the equation  $AX = V + W$  consistent?

**Sol<sup>n</sup>.**  $AX = V$  is consistent means  $V \in \text{col}(A)$ , and  $AX = W$  is consistent means

$W \in \text{col}(A)$ . But  $\text{col}(A)$  is a subspace.

$\therefore V + W \in \text{Col}(A) \therefore AX = V + W$  is consistent.

Vector Spaces

5. Let  $H = \text{Span}\{v_1, v_2\}$  and  $W = \{u_1, u_2\}$ , where  $v_1 = \begin{bmatrix} 5 \\ 3 \\ 8 \end{bmatrix}$ ,  $v_2 = \begin{bmatrix} 1 \\ 3 \\ 4 \end{bmatrix}$ ,  $u_1 = \begin{bmatrix} 2 \\ -1 \\ 4 \end{bmatrix}$ ,

and  $u_2 = \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix}$  and  $K = H \cap W$ , find the basis for  $K$ .

**Sol<sup>n</sup>.** Geometrically  $H$  and  $W$  are the planes in  $R^3$ .  $H \cap W$  is a line of intersection of the planes  $H$  and  $W$ .  $\therefore K$  can be written as  $c_1v_1 + c_2v_2$  and also as  $c_3u_1 + c_4u_2$ .

$$\text{Coefficient matrix } A = \begin{bmatrix} 5 & 1 & -2 & 0 \\ 3 & 3 & 1 & 0 \\ 8 & 4 & -4 & -1 \end{bmatrix} \quad \therefore \rho(A) = 3$$

$$\text{By reducing it to echelon form } A = \begin{bmatrix} 1 & 5 & 4 & 0 \\ 0 & -12 & -11 & 0 \\ 0 & 0 & -3 & -1 \end{bmatrix}$$

Let  $c_4 = k$  (free variable)

$$c_3 = -\frac{1}{3}k, \quad c_2 = \frac{11}{36}k, \quad c_1 = -\frac{7}{36}k. \text{ Thus } c_1 = -\frac{7}{36}k, c_2 = \frac{11}{36}k, c_3 = -\frac{1}{3}k, c_4 = k$$

Every vector in  $K$  is either  $c_1v_1 + c_2v_2$  or  $c_3u_1 + c_4u_2$ .

$$-\frac{7}{36}k \begin{bmatrix} 5 \\ 3 \\ 8 \end{bmatrix} + \frac{11}{36}k \begin{bmatrix} 1 \\ 3 \\ 4 \end{bmatrix} = \begin{bmatrix} -24k/36 \\ 12k/36 \\ -12k/36 \end{bmatrix} = \frac{k}{3} \begin{bmatrix} -2 \\ 1 \\ -1 \end{bmatrix}$$

$$\text{OR } -\frac{1}{3}k \begin{bmatrix} 2 \\ -1 \\ 4 \end{bmatrix} + k \begin{bmatrix} 0 \\ 0 \\ 1 \end{bmatrix} = \frac{k}{3} \begin{bmatrix} -2 \\ 1 \\ -1 \end{bmatrix} \therefore \text{Basis for } K = \left\{ \begin{bmatrix} -2 \\ 1 \\ -1 \end{bmatrix} \right\}.$$
